Art Unit: 1652

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, and 18 drawn to nucleic acids, vectors, host cells and expression of a ubiquitin conjugating enzyme (UBC), classified in class 435, subclass 6.
- II. Claims 6-9, drawn to a ubiquitin conjugating enzyme (UBC), classified in class 435, subclass 183.
- III. Claim 10, drawn to antibodies to UBC, classified in class 530, subclass 387.9.
- IV. Claims 11-12, drawn to a method of screening for modulators of the activity of UBC, classified in class 435, subclass 4.
- V. Claims 13, 14 and 16, drawn to methods of treating with a UBC inhibitor, classified in class 514, subclass 789.
- VI. Claim 15, drawn to methods of treating with a UBC, classified in class 424, subclass 94.5.
- VII. Claim 17, drawn to methods of treating with a UBC agonist, classified in class 514, subclass 789.

The inventions are distinct, each from the other because of the following reasons:

The DNA of Group I and the proteins of Groups II and III, each comprise a chemically unrelated structure capable of separate manufacture, use and effect. The DNA comprises a

Art Unit: 1652

nucleic acid sequence and the proteins of Groups II and III each comprise an unrelated amino acid sequence. The DNA has other utility besides encoding the proteins such as a hybridization probe, the proteins can be made by another method such as isolation from natural sources or chemical synthesis and the proteins have other utility besides acting as an antigen to induce the antibodies such as for the methods of Group VI.

Inventions II and IV or VI are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the proteins can be used to induce the antibodies of Group III.

The DNA of Group I and the antibody of Group III are unrelated to the method of Groups IV and VI as they are neither used nor made by the methods of Groups IV and VI.

The DNA of Group I, the proteins of Group II and the antibody of Group III are unrelated to the methods of Group V and VII as they are neither used nor made by the methods of Group V and VII.

Art Unit: 1652

The methods of Groups IV-VII are independent as they comprise different steps, utilize different products and produce different results.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
